

## Available Mounts: Pole Mount

### Purpose:

This mount is used on sites with pitched roofs and no tower to mount a dish on. Installation requires quick dry concrete, two pieces of rebar and a 10ft steel pole that will fit into the Az/EL (2 3/8 inches). Locate an area at the site that has access to an unobstructed view of the southwest sky, making sure it is in an area that is not heavily trafficked and that the ground is not disturbed. Do not select an area without approval from the local site contact. Local site must obtain approval to dig in the area selected.

### Catalogue Description

There is no catalogue description for this mount as it is built from supplies found in local hardware supply stores. PLEASE NOTE: All supplies purchased by technicians must have the receipts for reimbursement. To install, dig hole 4' deep for mount. Drill holes into pole and insert two pieces of rebar, one at a 90° angle and one at a 45° angle to prevent the pole from moving with in the concrete.
