

Available Mounts: Large Tower Mount

Purpose:

To use this mount you need to have a pitched or inaccessible roof and an existing tower structure that has legs larger than three inches. Please note that the way the clamps are set will determine the size of the pipe that can be used. The tower needs to be on the South end of the building as we will only install approximately 10ft up for installation safety and maintenance purposes. Logistics will need to receive a description of the tower, pictures of the tower, and a measurement of the tower leg diameter before it can approve this mount for each site.

Catalogue Description & Actual Picture:
